SAS Cloud x Microsoft Azure

Today

- SAS efficiencies through Azure asset migration
- Improved scalability with access to Microsoft resources
- Jointly designed architecture for SAS Cloud for network, memory, processor and storage optimization
- Faster implementations with standardized Microsoft IaaS deliveries

Future

- SAS Viya available on SAS Cloud (running on Microsoft Azure)
- Deeper product integrations available first on SAS Cloud
- SAS Cloud further optimized for Microsoft Azure

Viya 2020

Key changes

- Designed to work natively on Azure AKS, AD, Azure DB for PostgreSQL
- Deeper integration in Azure Services (Synapse, PowerBI, AzureML, ..)
- Better performance through further decomposition
- Improved APIs and support for GitOps/DevOps processes
- SAS solutions will be presented in Azure Marketplace
- Available as SaaS from SAS Cloud on Azure
- No upgrades or hotfixes, monthly or LTS updates
- Continuous updates of Viya platform with semantic versioning

Semantic Versioning

LONG-TERM SUPPORT RELEASE

2020.1

STABLE RELEASE

2020.1.1

- LTS: all 6 months
- Stable releases: once a month
- New features and bug fixes are updated monthly
- Aligned versions. Instead of Visual Analytics 8.4 and Model Manager 15.3, now Visual Analytics 2020.2 and Model Manager 2020.2.

Month	Stable	LTS
July 2020	2020.0.3	
Aug 2020	2020.0.4	
Sept 2020	2020.0.5	
Oct 2020	2020.0.6	
Nov 2020	2020.0.7	2020.1
Dec 2020	2020.1.1	
Jan 2021	2020.1.2	
Feb 2021	2020.1.3	
Mar 2021	2020.1.4	
April 2021	2020.1.5	
May 2021	2021.1.1	2021.1
June 2021	2021.1.2	
July 2021	2021.1.3	
Aug 2021	2021.1.4	
Sept 2021	2021.1.5	
Oct 2021	2021.1.6	
Nov 2021	2021.2.1	2021.2

SAS Viya 2020 – How to prepare?

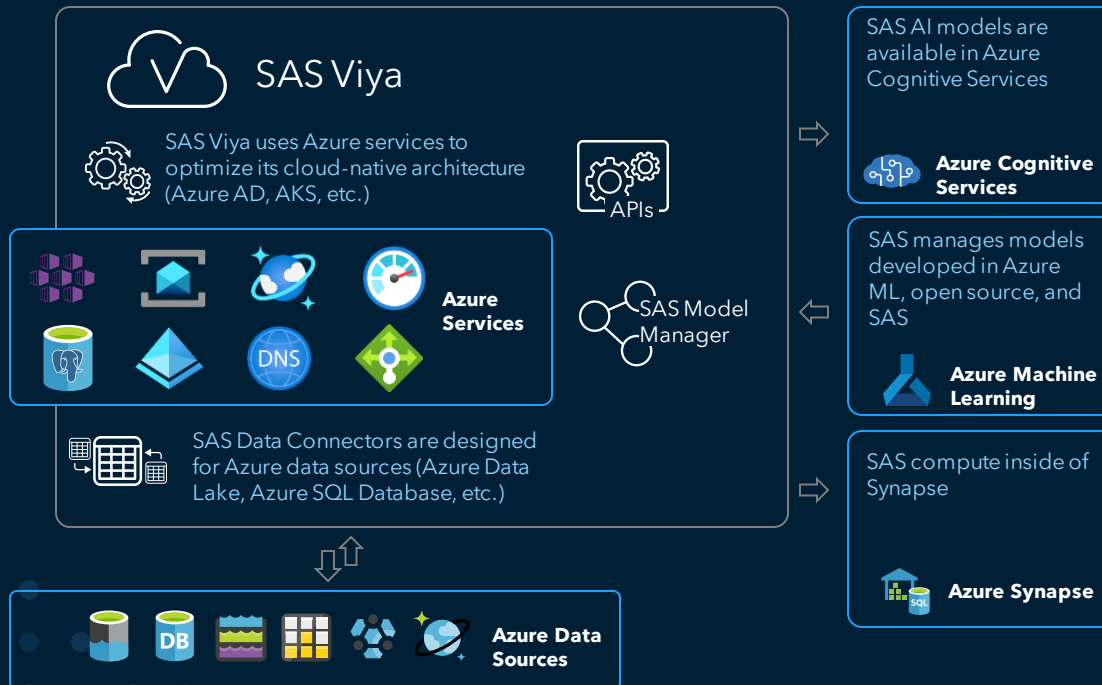

- Get experience with Kubernetes and storage classes
 - Think about migrating your data to cloud services as Azure DB / SQL / Data Lake
 - Guidance to performance implications due to the choice of storage classes (data gravity)
 - Other applications can run in separate namespaces without affecting SAS
- Think about your ingress (f.e. istio, nginx, traefik) to allow external access to the application
- Define a security concept for Cluster admin privileges
- Choose your future identity provider (e.g. Azure Active Directory)
- Get familiar with kubectl and kustomize as administration tools
- Think about logging and metrics tools like Prometheus and Graphana

SAS Viya 2020 – Who is involved?

- Maintain the Kubernetes cluster, operate with K8s API
- Perform the (k/c)ustomizations and run the deployment
- Monitor environment, scale and bounce services as needed
- Maintain the SAS environment
- Manage users, metadata, permissions, data
- Use the environment and different tools and programming languages
- Profit from dynamic environments in the cloud

SAS' interoperability with Microsoft Azure

Benefits

- **Cloud-native** integration optimized resources
- Easily **access all data**
- **Develop advanced models** with any language
- **Manage and govern** all models across all clouds
- **Accelerate** AI model development and management

* consult the co-development roadmap for integration timelines

The Experience of SAS Cloud on Azure

	HW providers	Cloud providers	SAS Cloud on Azure

SAS

SAS Viya 2020 – Overall Benefits

- Shared responsibility with Microsoft / SAS
- Auto-scaling compute power with Kubernetes
- Removes need of OS-specific tools and RPMs
- Rolling updates, no major releases
- No core-based license possible
- Installations without Ansible but with kustomize
(to create Kubernetes manifest file, execution with kubectl)
- SAS and Microsoft are certified partners for your cloud strategy
