INTRODUCING THE

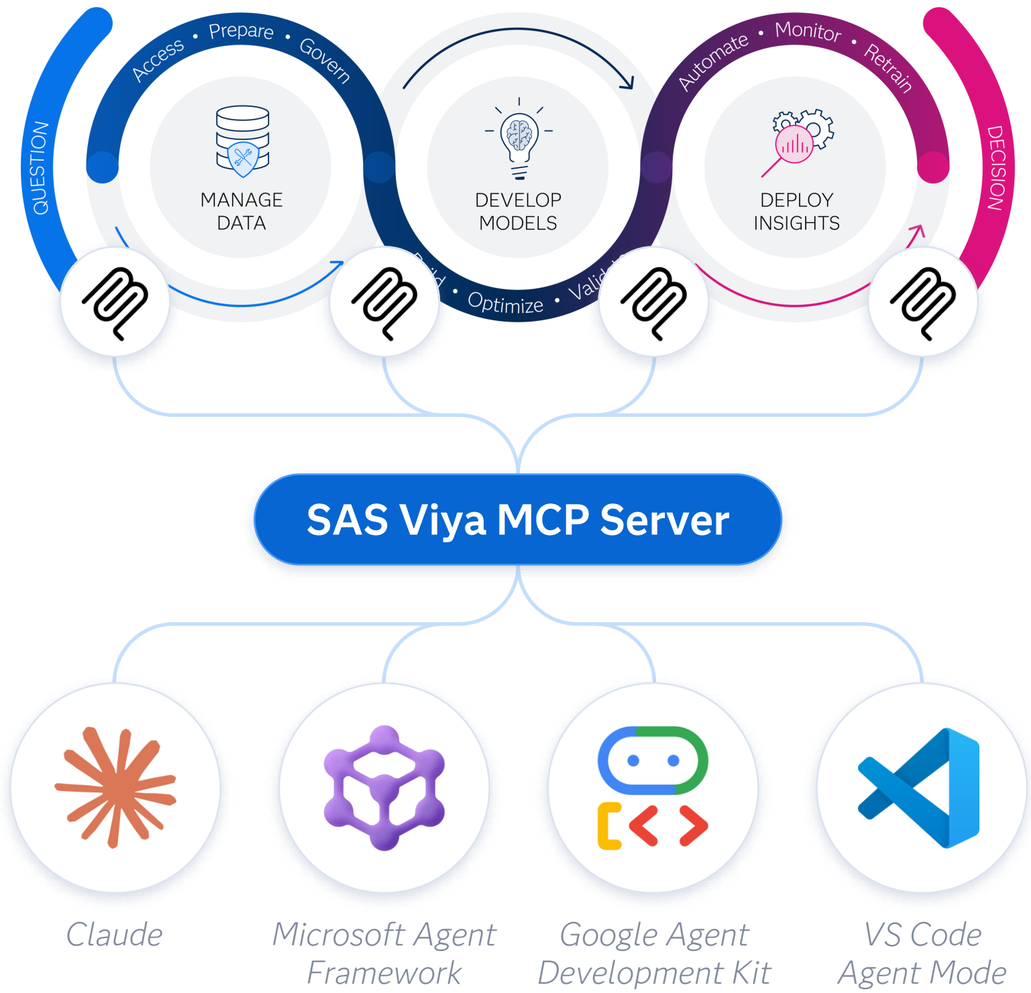

SAS Viya MCP Server

An open-source MCP server, available through Github, that exposes SAS Viya capabilities as tools that any AI agent can securely invoke to execute tasks.

SAS customers and partners can file bug reports, request improvements, or propose changes directly on GitHub.

What Capabilities It Exposes Today + Roadmap

Capabilities span the full Analytical Lifecycle:

- Compute Contexts & Code Execution
- Data Discovery
- Data Operations & Files
- Reports & Visualization
- Batch Jobs & Async Execution
- Automated Machine Learning
- Model Management & Scoring
- Decisioning (SAS Intelligent Decisioning)

Roadmap:
Clinical Acceleration, Guides for Authorization & more

SAS Viya MCP Server

91 Tools and Growing – Fully Open-Source

TIER 0	Compute Contexts & Code Execution
TIER 1	Data Discovery
TIER 2	Data Operations & Files
TIER 3	Reports & Visualization
TIER 4	Batch Jobs & Async Execution
TIER 5	Automated Machine Learning
TIER 6	Model Management & Scoring
TIER 7	Decisioning
TIER 8	Workbench
TIER 9	Business Glossary

Prompt Templates

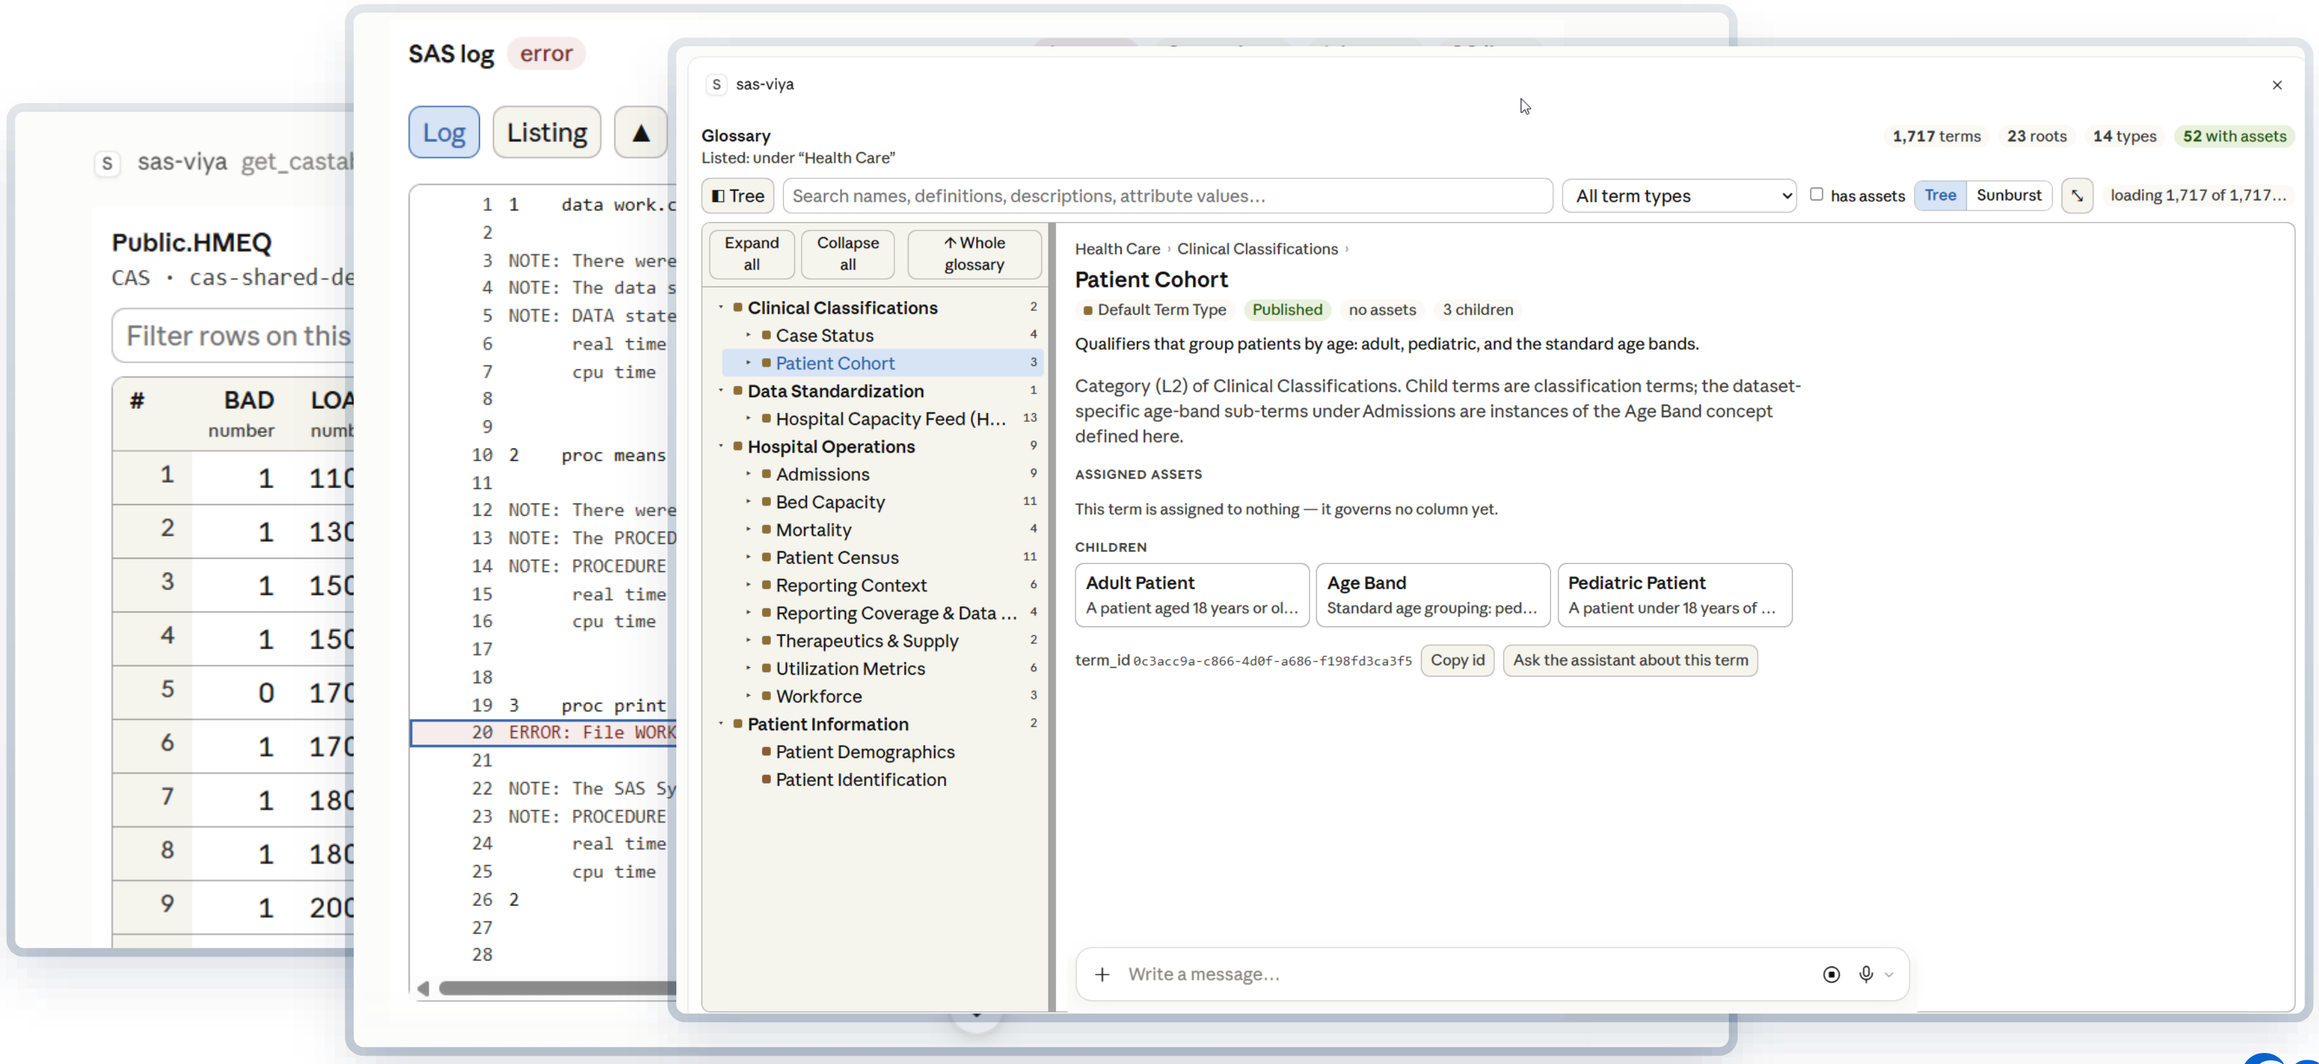

Getting to Insights Faster

debug_sas_log	*Analyze SAS log for errors with root-cause explanations*
explore_dataset	*Generate data-profiling SAS code*
data_quality_check	*Generate DQ assessment code*
statistical_analysis	*Set up a statistical workflow with diagnostics*
optimize_sas_code	*Review and optimize SAS code*
explain_sas_code	*Block-by-block code explanation*
sas_macro_builder	*Build production-quality SAS macros*
generate_report	*Generate ODS/PROC REPORT code*
build_va_dashboard	*Guide a polished multi-page Visual Analytics dashboard build from a CAS table*

MCP App Support

Currently Four Provided Apps

Copyright © SAS Institute Inc. All rights reserved.

Copyright © SAS Institute Inc. All rights reserved.

Identity provider:
SSO, roles,
blinding groups

Agent Runtime

SAS Viya Copilot, SAS Retrieval Agent Manager, Claude Cowork, Codex, Antigravity,...
Proposes programs, QC code, metadata and memos.
Sees code, metadata and aggregates, never patient-level rows.

SAS Viya MCP Server

The Control Boundary

Calls run under the user's identity; tools scoped by role; every call logged with user, time, inputs and outputs. Absent by design: delete of production libraries, direct write to SDTM.

Compute & CAS
Runs generated and QC programs; standard macro library; %std_compare

SAS Content Repository
Programs, logs, outputs, ARS metadata; versions and folder authorization

Information Catalog & Glossary
Standard macro catalog, clinical terms, lineage, Blinding Sensitive flags

Intelligent Decisioning
Guardrails, log verdict, QC level, release gate; locked revisions, rule-fired history

Model Manager
Copilot configuration as a governed asset; agreement, override and log-failure KPIs

Audit store:
tool trace,
rule-fired history,
evidence packages
