Kurzer Review zu unserem ersten VA NT

Bridging Customers and R&D

Falko Schulz

Travelling from Australia to Germany, Falko Schulz became far more than a speaker. By participating in customer visits, listening sessions, roadshow discussions, and the event itself, he helped establish direct dialogue between customers and the Visualization organization. The interaction created valuable opportunities for learning on both sides and helped bring customer perspectives closer to product development discussions.

> *Jeff and I both came away from the week energized, inspired, and with a much better understanding of how customers are using Visual Analytics in the real world.*

Jeff Diamond

Travelling from Cary, Jeff Diamond played an important role in strengthening the connection between customers, Customer Success, and the broader SAS organization. Throughout the roadshow and event week, Jeff Diamond actively joined customer conversations, exchanged perspectives, and helped create exactly the type of direct interaction that VANT was intended to foster. The value of this exchange was recognized by customers and colleagues alike.

> *The direct exchange between customers, Customer Success, and R&D is exactly what we had hoped to create.*

The success of the first Visual Analytics Network Meeting was crucial to establishing the new community format. With **Jeff Diamond** and **Falko Schulz**, two senior representatives from SAS Visual Analytics Product Development were secured as speakers and moderators. Their participation gave the event credibility, relevance, and strategic significance, while signalling to customers that their requirements and feedback were being heard directly by those responsible for the product's continued development. At the same time, the two experts enabled a high-quality exchange of expertise and, from its very first edition, established the Visual Analytics Network Meeting as a credible platform for the Visual Analytics community.
