

SAS Viya Copilot: Under the Hood

Julia Florou-Moreno & David Weik

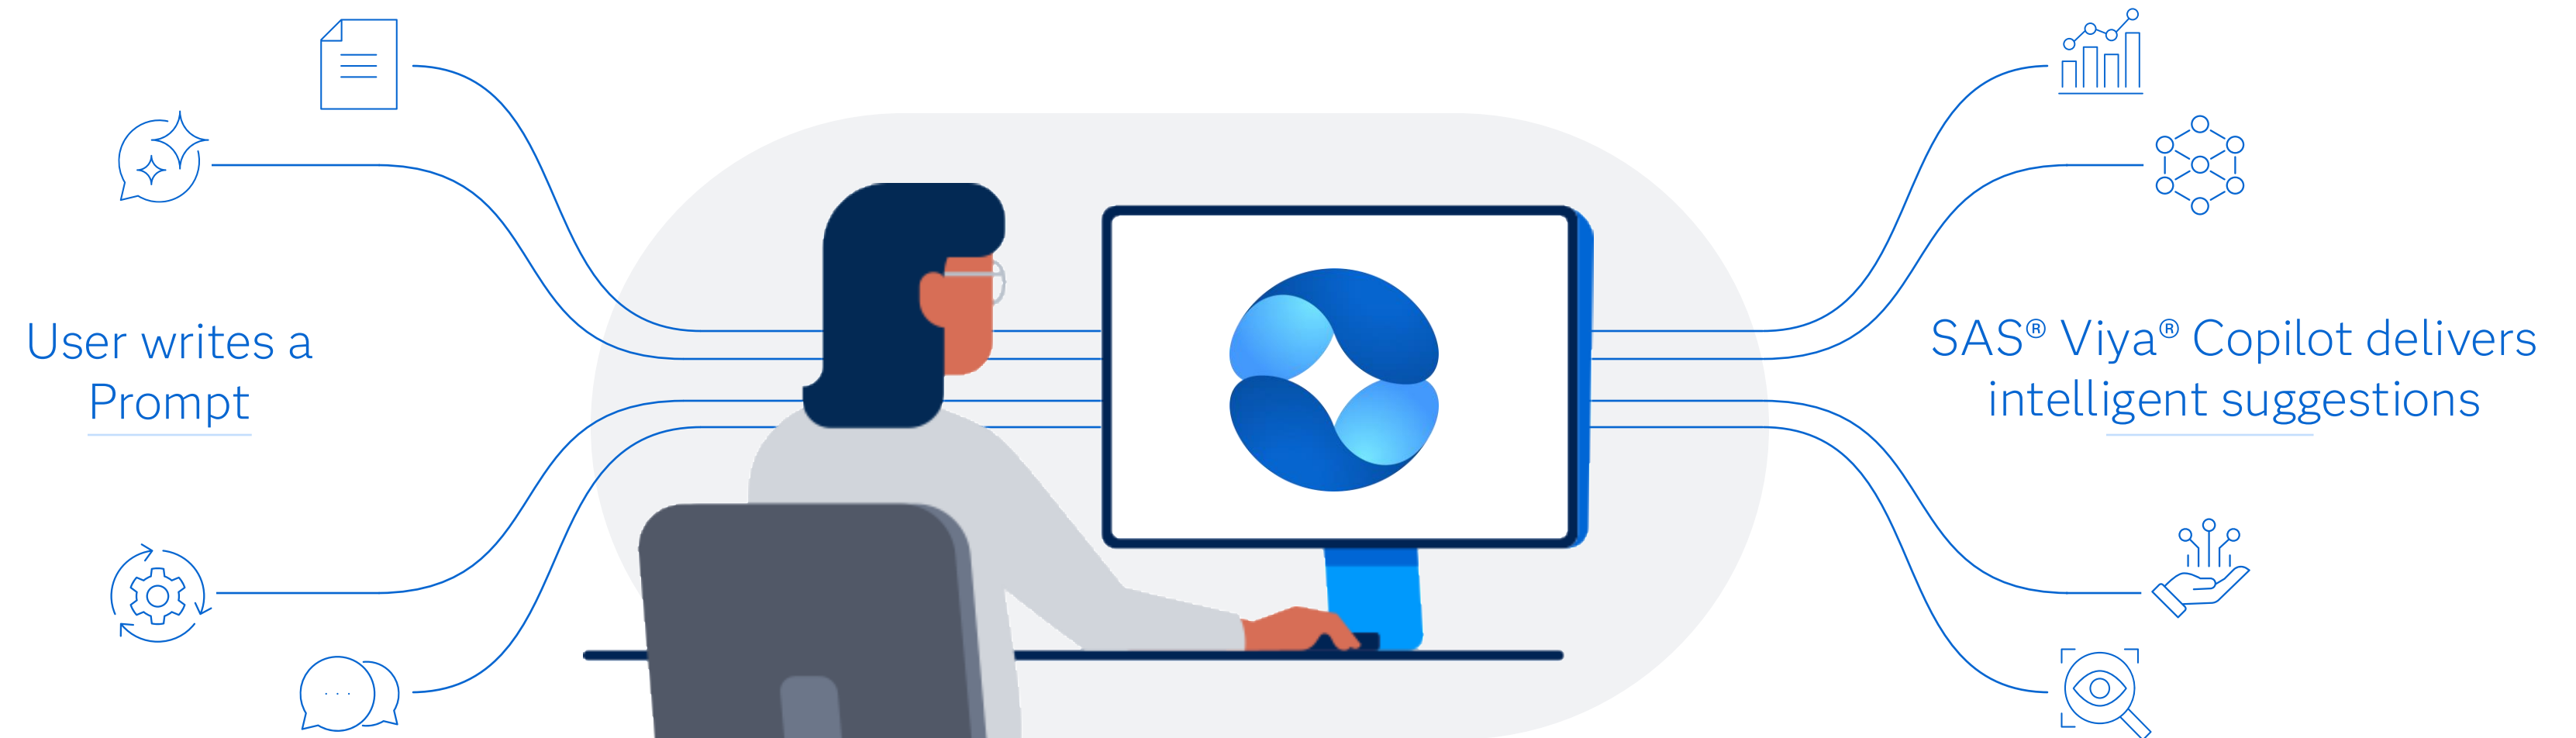

Overview

- Overview of SAS Viya Copilot
- Technical Lens: the GenAI platform
- Security & Guardrails
- Handling Customer Data
- Summary

SAS Viya Copilot Overview

SAS® Viya® Copilot

With the latest GenAI tech

Large Language Model
Microsoft Partnership

SAS® Viya®
Knowledge Base

Trustworthy
and Secure

SAS Model
Studio

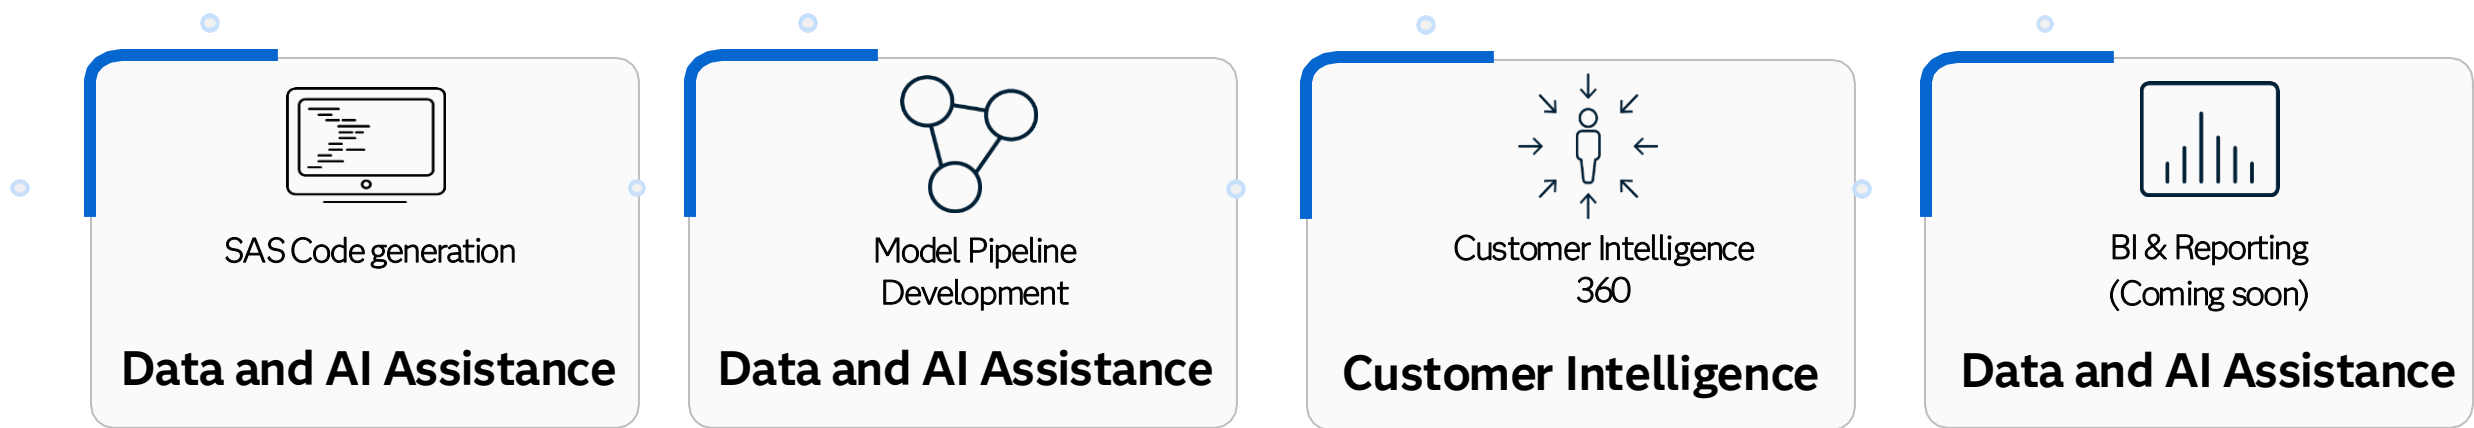

SAS® Viya® Copilot is available

Company Confidential — For Internal Use Only
Copyright © SAS Institute Inc. All rights reserved.

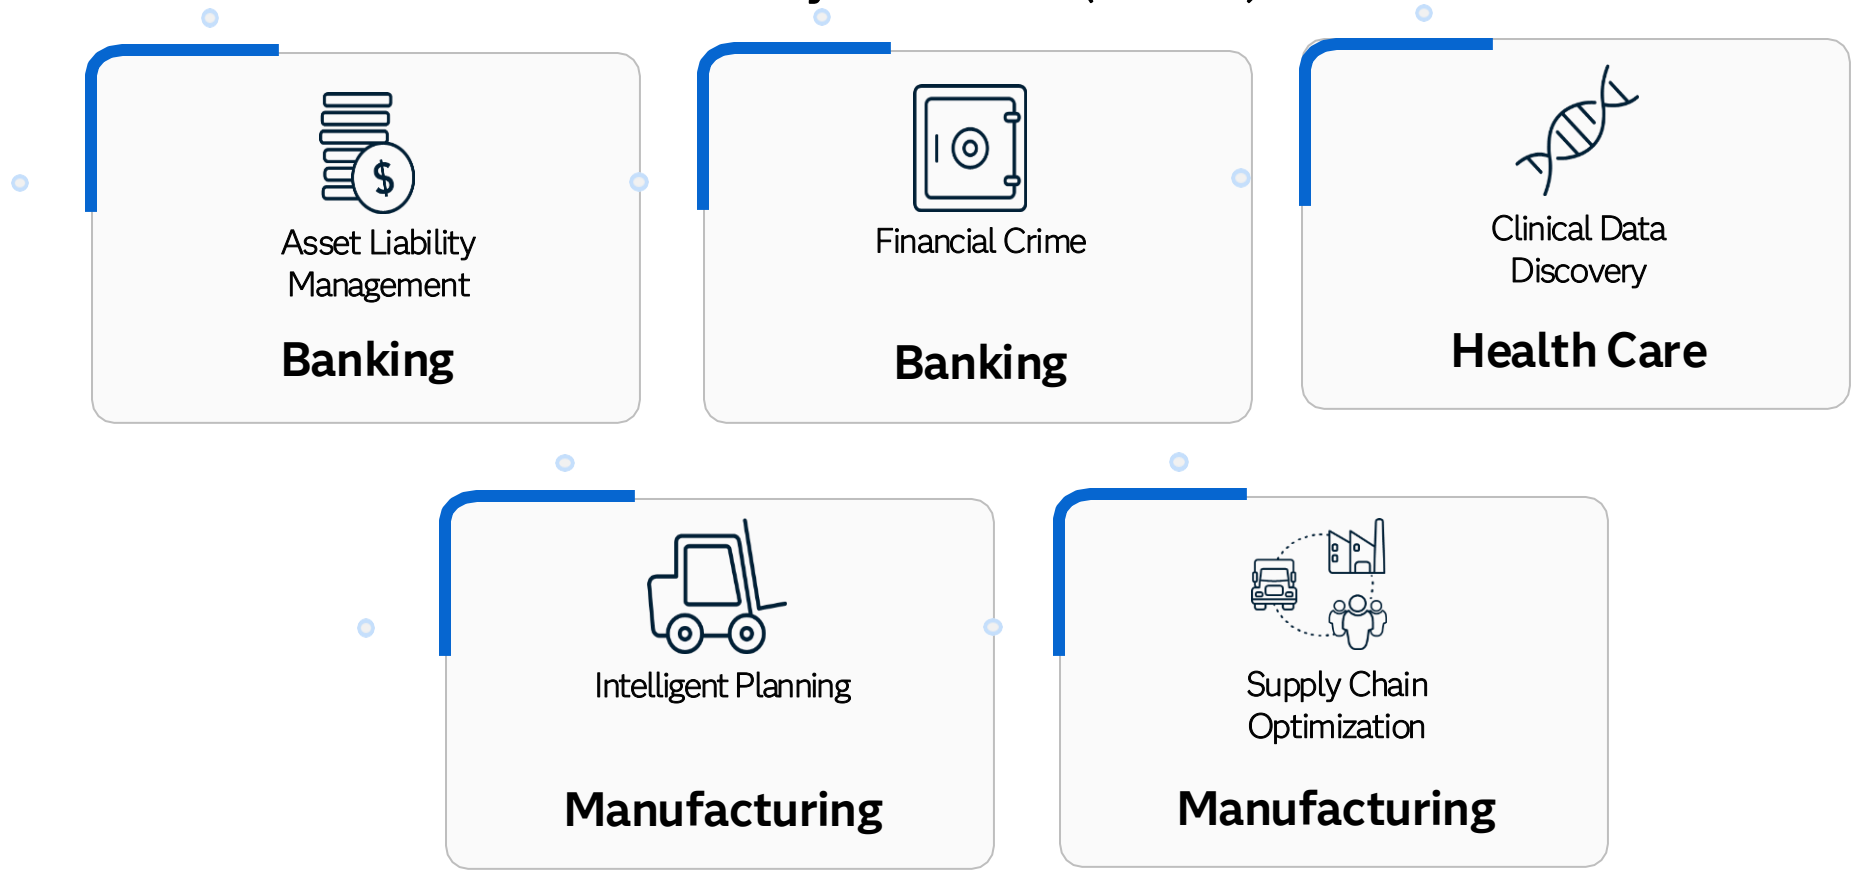

SAS Viya Copilot Portfolio

Data and AI Platform & Horizontal Solutions

Industry Solutions (*Future*)

SAS® Viya® Copilot for Data and AI assistance

**Supports
Multiple
Personas**

Developer

Builds and refines ML pipelines using conversational prompts to automate modeling steps and optimize performance

Business Analyst

Deploys, monitors, and governs models through guided workflows and performance diagnostics

Data Scientist

Accelerates experimentation and documentation with exploring data, feature engineering, and statistical analysis support and explain model results

SAS® Viya® Copilot is Coming Soon

Company Confidential — For Internal Use Only
Copyright © SAS Institute Inc. All rights reserved.

AI assistants for next-level productivity in data and AI lifecycle

Empower analysts, data scientists, and programmers to work smarter, faster, and deliver impactful insights

Generate, explain and comment SAS code

AI-driven support for data analysis, reporting and model development

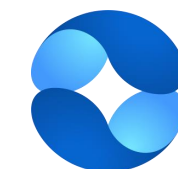

Secure execution with human in the loop

Generate reports and dashboards

Generate and comment SAS code

Explain models and key trends

Check Data Quality

ORCHESTRATION

INFORMATION GOVERNANCE
STUDIO

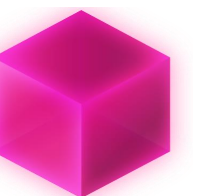

VISUAL ANALYTICS
MODEL STUDIO

MODEL MANAGER

INTELLIGENT DECISIONING

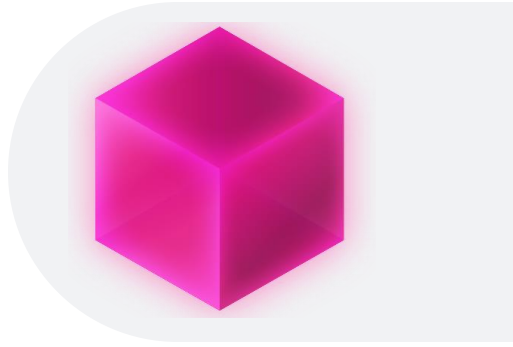

CONVERSATIONAL AI

SAS Viya
for the Enterprise

Currently Available in

- SAS Information Catalog
- SAS Visual Analytics – Public preview
- SAS Model Studio
- SAS Model Manager
- SAS Intelligent Decisioning
- SAS Environment Manager
- SAS Visual Investigator – Public preview

For faster model pipeline development

Detailed explanations of methods and options

Next node suggestions for building a pipeline

Suggestions for improving existing nodes

Explanation and interpretation of output and results

INFORMED EXPLANATIONS

INTELLIGENT SUGGESTIONS

ONE-CLICK IMPLEMENTATION

SAS Viya Copilot®

For Model Pipeline Development

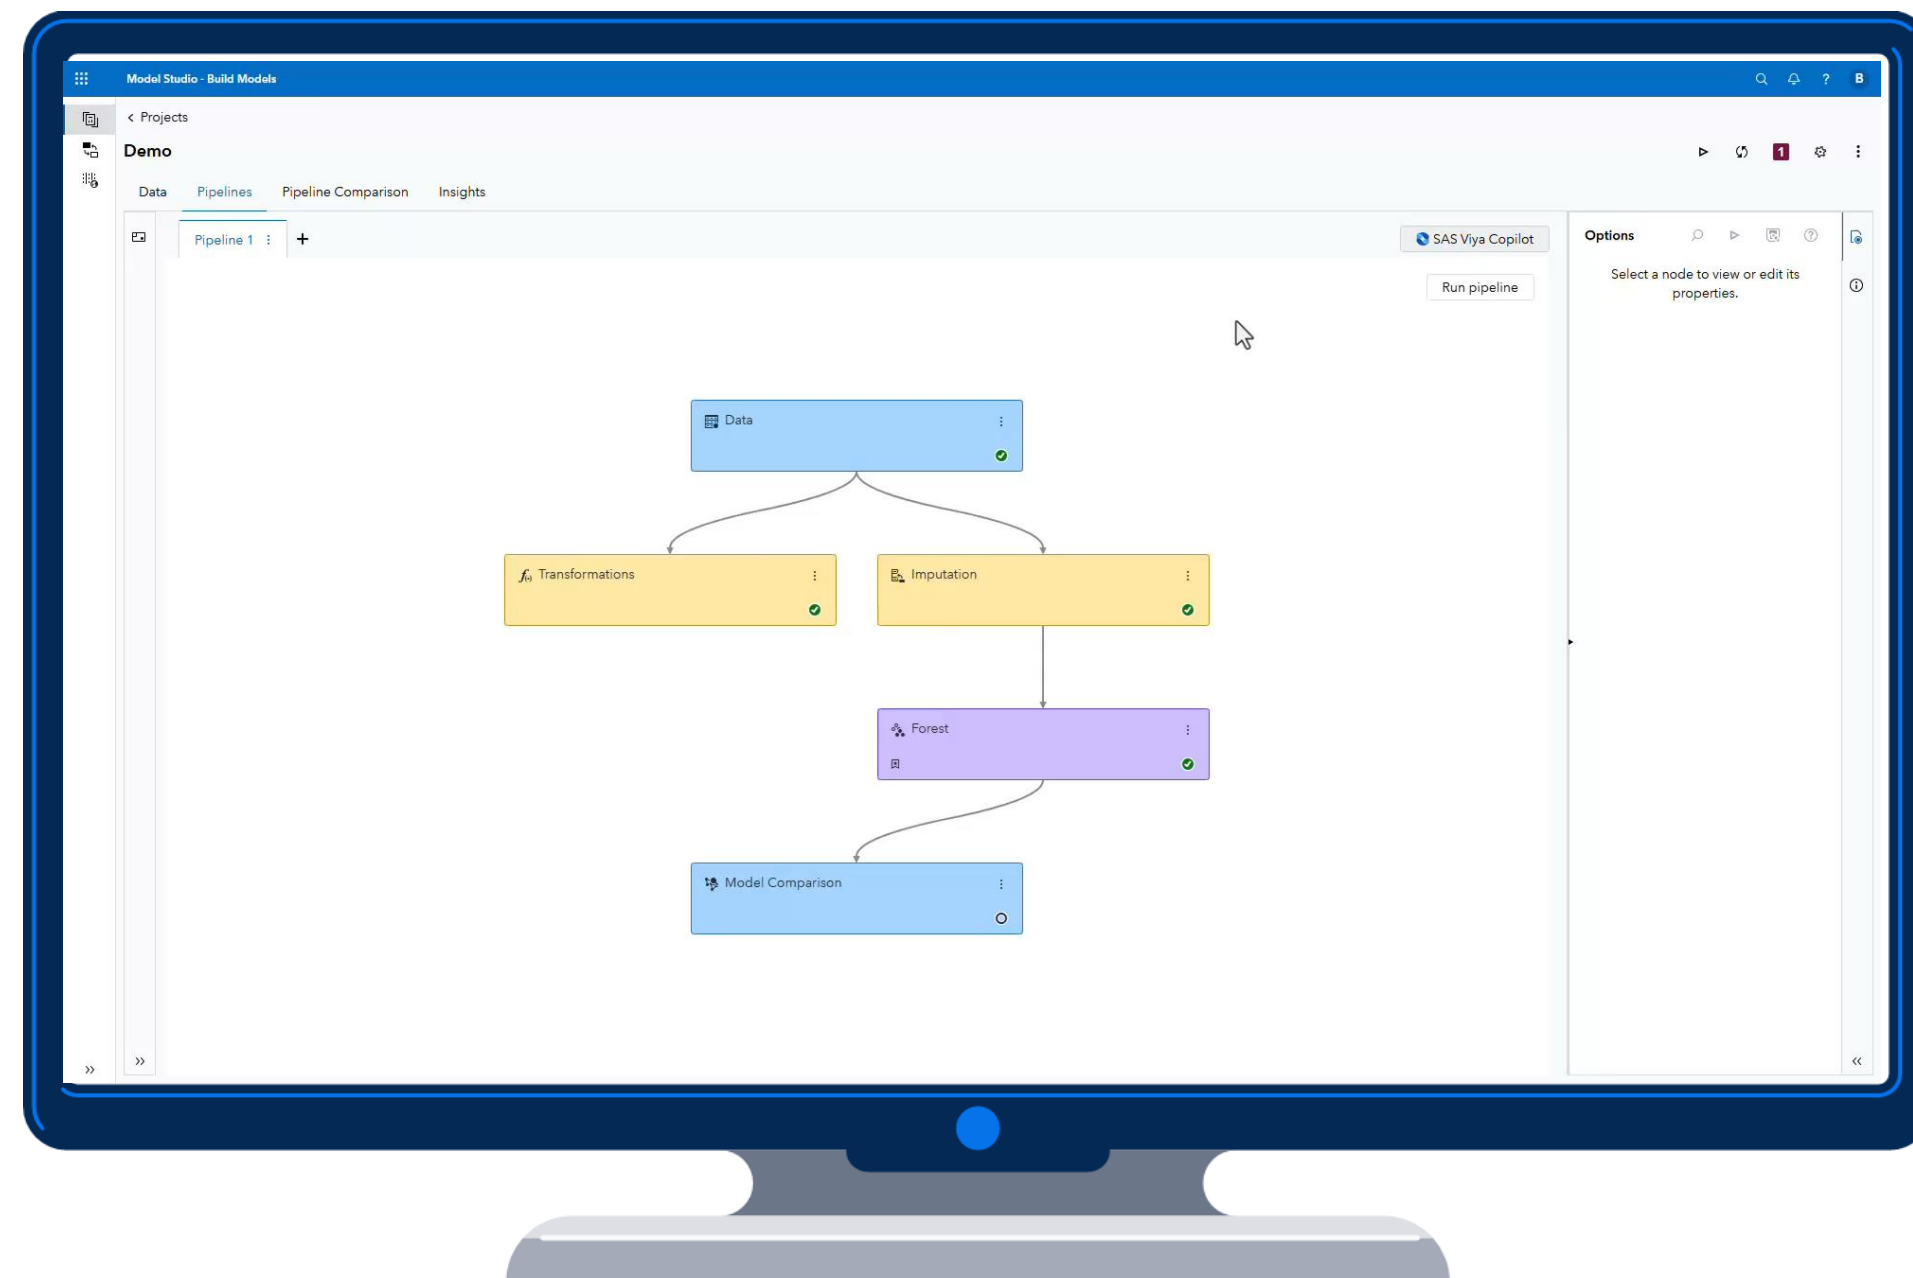

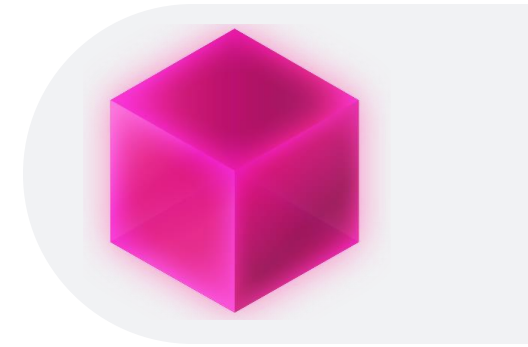

AI-assisted model building, for more productive AI/ML

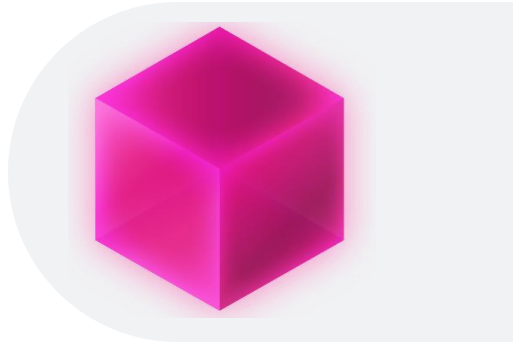

Provide intelligent suggestions on the next best step

Recommend precision-focused model improvements

For Augmented Analytics

Intelligent Insights

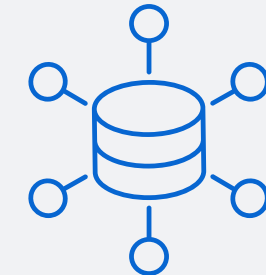

- ✓ Natural language Q&A
- ✓ Automated model building and explanation
- ✓ Prompt-based calculations

Dynamic Visual Design

- ✓ Dynamic reports creation
- ✓ AI-assisted visual optimization
- ✓ Automated layout management

Data Integration

- ✓ Intelligent data integration
- ✓ Data pane customization
- ✓ AI-assisted data storytelling

SAS Viya Copilot®

For Augmented Analytics

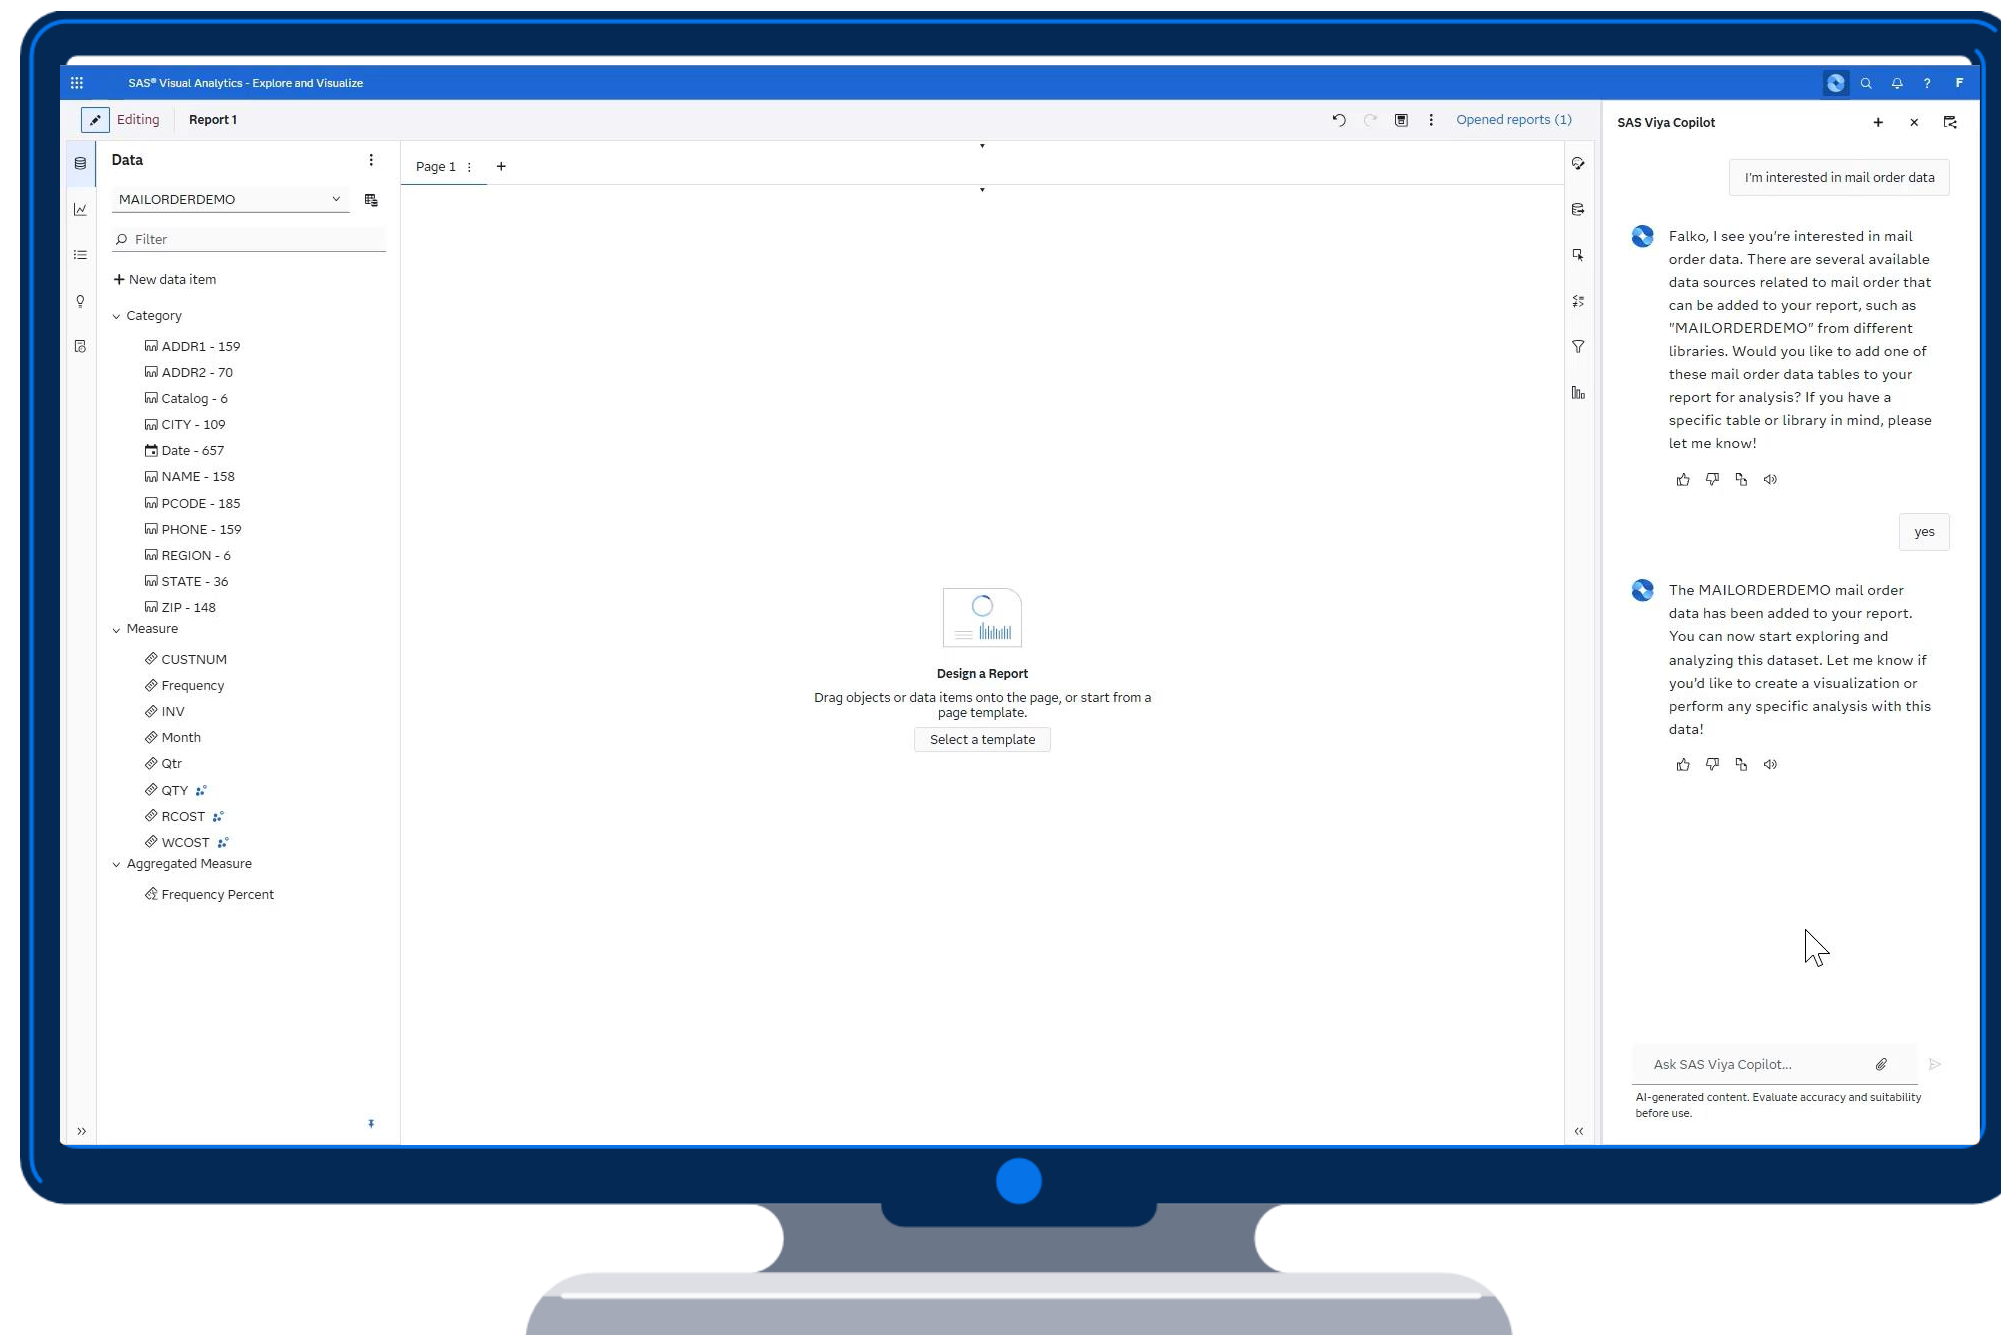

Augment data manipulation with context-aware generative AI

Generate interactive and intuitive dashboards with AI

Uncover insights faster with AI generated explanations

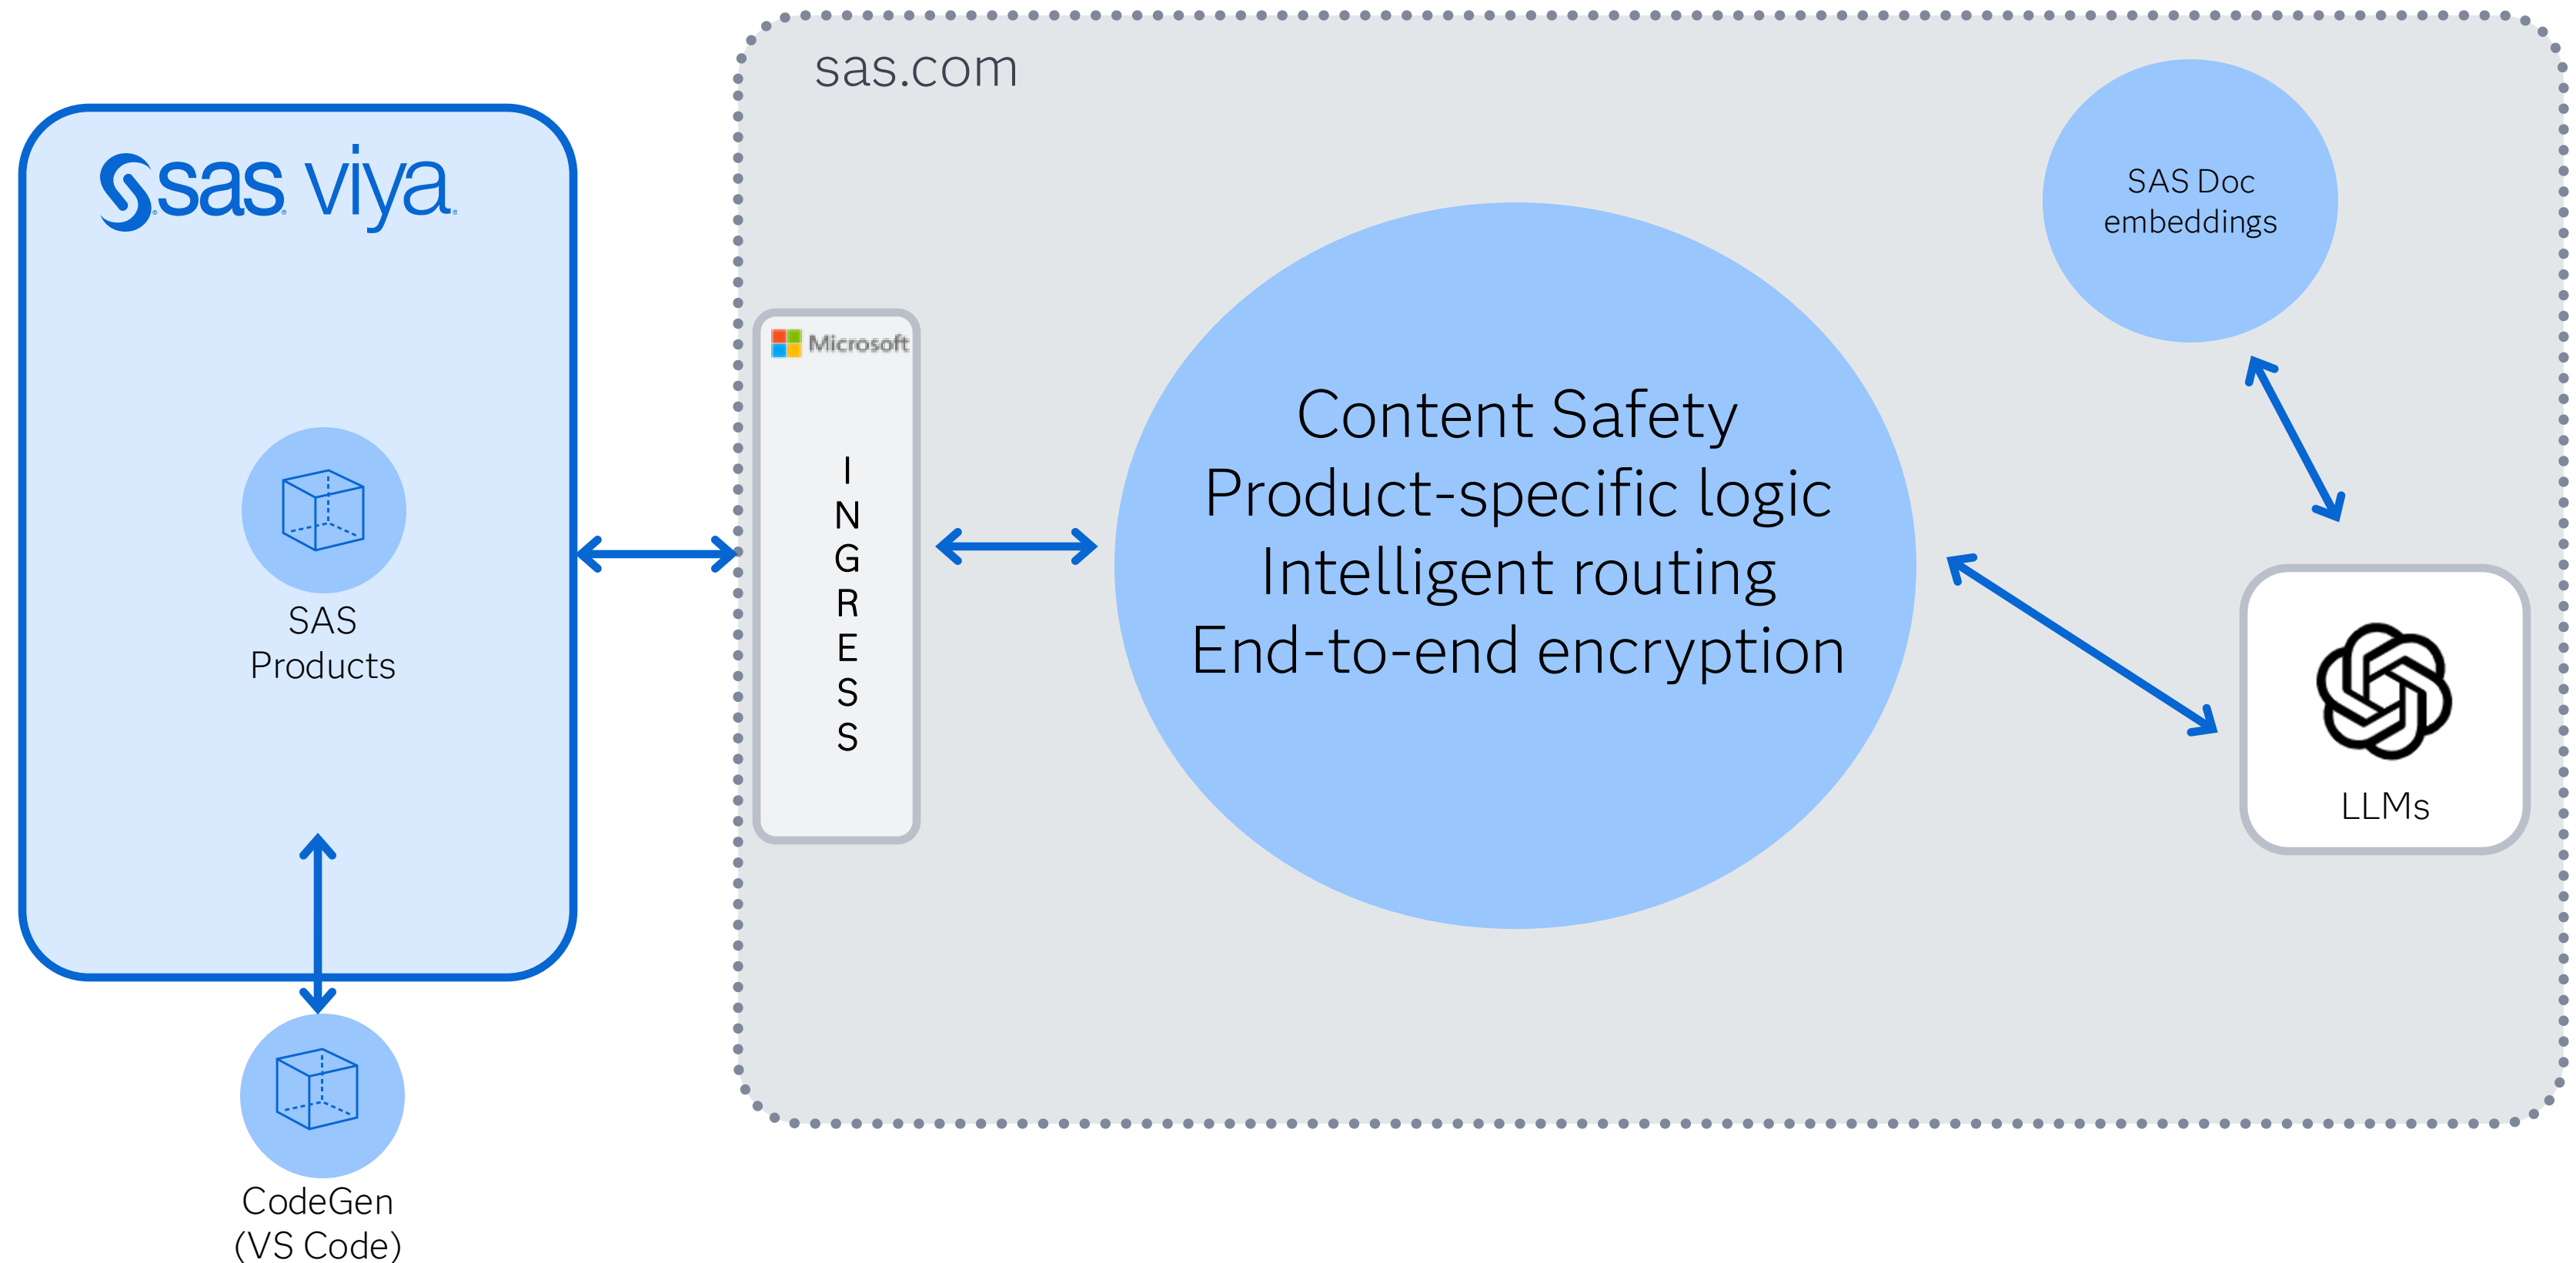

GenAI Platform

What is the GenAI Platform?

- A single, cloud-based platform that unifies the approach of accessing GenAI across SAS, ensuring security, safety, quality and consistence across SAS's tech stack. It is the underlying architecture for GenAI features for SAS Viya Copilot.
- Hosts logic for applications across SAS, LLMs, text embedding models, RAG for SAS documentation querying together with end-to-end TLS, AI-centered guardrails, and usage metrics gathering without storing customer data.

SAS GenAI Platform

Viya Copilot & the GenAI Platform

- Access to Viya Copilot and the GenAI platform is configured by an admin in Environment manager – this switches on/off the ability to leverage the features hosted in the GenAI platform
 - All Viya Copilot features or none

Security & Guardrails

Azure AI Content Safety from Microsoft

- Built-in guardrails for AI applications, helping detect and block harmful, unsafe, or non-compliant content before it reaches users or downstream systems.

Guardrails applied at multiple stages

- User input
- Model output

Content Safety enforces

- Content safety policies (allow, flag, block)
- Protection against prompt-based attacks
- Enterprise and regulatory compliance requirements

Guardrails & Safety

Harmful content detection

1

Prompt protection

2

Output integrity

3

Handling Customer Data

Storage of Customer Data

- No customer data is stored by SAS in Azure, including prompts. It is only passed through to be processed.
 - SAS is not doing anything intentional to retain or store customer data through the logic SAS has written and which executes in Azure.
 - We have opted out of storage of prompts for Microsoft's abuse monitoring
- There is no customer data captured in SAS-created or SAS-accessible logs on the Azure side.

Processing of Customer Data

The following customer data could be sent to Azure to be processed:

- Any inputs from an end user e.g. a prompt typed into a Copilot chat interface
- Any data stored in Viya
 - Which data gets sent to SAS Viya Copilot, is be decided by the Product and Solutions engineering teams, with the expectation is that only data which is necessary and relevant to the product's functionality would be sent.
- Metadata, such as the database table names, columns, etc

Note: The data is sent but not stored. All traffic is encrypted end-to-end.

Storage of Metrics, Logging, Telemetry

The following information is stored in logs in Azure. None of the below is customer data, or PII.

- public IP addresses of Azure services
- The Site Number for the customer
- The SAS application being used
- The version of Viya
- IDs for the chat and message for Viya Copilot
- The total input and output tokens
- The size of the user prompt, in characters
- The response time in milliseconds

Summary

Summary

- Viya Copilot is a new offering, allowing you to use Viya with AI-assisted features.
- Viya Copilot "under the hood" is enabled by the GenAI platform, a cloud-based platform hosting models and collecting some metrics for product improvements
- No customer data is stored, only transited, encrypted with end-to-end TLS
 - For more info, see the [Trust Center Documentation](#)

SAS Viya Copilot continues to grow with new features being released monthly – Watch this space!
